

No-Till Drill Cleaning Instructions

Cleaning

Seed Boxes:

- ⇒ Never spray water into seed boxes
- ⇒ Use an air compressor to blow out extra seeds or use a shop vac
- ⇒ Make sure seed tubes are blown out well, seed left inside will absorb moisture and start growing, clogging up the tubes

Discs and Tires:

- ⇒ Make sure discs and tires are clean of mud
- ⇒ Use a hose and water to spray off mud and other debris
- ⇒ Try to avoid spraying water up into seed tubes

Disinfecting

TCD Staff will spray the wheels and discs with disinfecting sprays prior to the equipment going out

Greasing Maintenance

TCD Staff will grease the machine between renters. If you have the drill longer than one rental time slot, TCD staff may discuss with you on how to maintain the grease points while renting it.
